

"We designed the portable Foldaway to bring in very good signals from VHF, UHF, SBS and even FM radio. This antenna can be used for horizontal and vertical signals, using our patented design. Another unique aspect of Foldaway is that it can be positioned into an inverted V configuration for easy fine tuning. No other caravan antenna can be compared to it! We've packed in real performance at an affordable price, for people on the move."

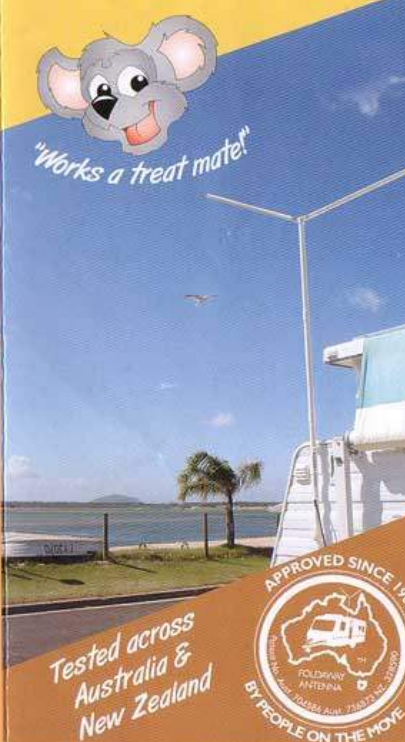

- Covers, VHF, UHF, FM, Digital Broadcasts regardless of signal polarisation.
- Simple to assemble and install
- "Eye level fit" means you can attach it quickly within arms length
- Optional extension for camper trailers
- Unbeatable performance for the price
- Tested all around Australia

"With a Foldaway, I reckon you could go to Mt. Kosciuszko in winter and not see any snow!"

"Works a treat mate!"

Tested across Australia & New Zealand

Here's why you see so many Foldaway Antennas up!

- Rugged, flexible construction with a multi-directional element.** The patented design moves to catch all types of signals, regardless of polarisation. Tuned for VHF and UHF, the antenna is digital compatible.
- Straight-forward attachment at eye level,** means no dangerous acrobatics when setting up! The marine grade top clip and bottom bracket are tough and durable in all types of weather. This antenna's unique elements can be moved to an inverted "V" for improved fine tuning.
- Easy access to cable, the pole effortlessly locks into place on the solid mounting bracket.** That's a blessing on cold mornings!
- Time to move on?** Everything folds down to just 90mm x 500mm and fits into its own storage container.

Tips for better TV Pictures using your Foldaway Antenna

1. When you move, you must re-tune your TV to the local stations, eg. Ch9 in Brisbane is on a different band to the Ch9 affiliate on the Sunshine Coast.
2. Besides the coax outside the van, don't forget to check the cable running inside, from the TV to the antenna plug. Often dirt, moisture and corrosion on this lead will affect the picture quality. Check it by plugging the Foldaway direct into the TV set.
3. Trees and bushes will absorb incoming signals. The Foldaway unique patented, multi-polarisation head enables you to position it off the van, in any position under the tree, inverted, even horizontally on the ground, to source the best signal path.
4. When you are in an area with very low signal, an amplifier from Foldaway will help. Ask about this excellent accessory which simply plugs right in.
5. A ghost in your picture is nothing to be scared off! The signal is bouncing off a hill or other large mass. A digital set-top box will cure this if you are in a digital signal area.
6. There are places where TV does not exist! These are commonly referred to as "Read a Book Instead Zones"

Do you have an Avan, Wind Up or Pop Top? You need the Foldaway Extra-extended! To keep your feet on the ground, we provide extra height, extra lead, extra-sized storage tube, be sure to let us know your needs before you order.
