## Introducing The New "READY TO GO" ePOWER Inverter Range from Enerdrive.

## Served to you on a plate with a side of RCD & GPO's, just add DC.

With the changes to the Australian Electrical Standards, AS NZS 4763-2011 Safety Of Portable Inverters, coming into effect on the 1st July 2013 and combined with the push from Work Place Health and Safety for RCD Protection for workers, Enerdrive have just released our "ready to go" Pure Sine Wave Inverter Package's to suit everyone's needs.

Three popular sizes are available in a ready to go system, 400w, 1000w and 2000w (12v).

Think you might like AC power in more than one spot in the Vehicle? Enerdrive have thought of this too. By utilising a clever AC Plug & Play GPO system you can quickly and easily add extra AC power points by just plugging them in.

All power points are Double Pole with the system incorporating a Type 'A' RCDBO with M.E.N Protection for safety and compliance in all permanently mounted mobile applications. These Inverter Packages are great for Professional Vehicles such as Telecommunications, Energy,

Council, Emergency Vehicles and let's not forget Recreation Vehicles like Caravans, Motorhomes, Camper Trailers and Marine applications.

***"You have Safety Protection at home and now you can have it where ever you go."***

Work sites have plenty of hazards such as vehicles, machinery and building materials lying amongst your tools and power leads. These items may be affected or damaged without you knowing and you don't want to be shocked when you find out. Make sure you are electrically protected and go home safe.

Installation is quick and easy, requiring only 6 mounting screws for the Plate and connection of the DC power. Your system is now ready to go.

*Three popular sizes are available in a ready to go system, 400w, 1000w and 2000w (12v).*
