DRIVING YOUR ENERGY NEEDS

# POWER SYSTEM SERIES

## THE ADVENTURER

Since 2008, Enerdrive has been working in the Caravan, RV and Marine industries as well as working alongside some of the country's leading canopy manufacturers. Enerdrive has taken this knowledge and experience to proudly bring to market it's range of Power System Series. Using a proven quality component build list and proven to withstand the rugged Aussie conditions, these systems are designed to suit the needs of installers and end users looking for a reliable power system. The components of the system are pre wired in house by Enerdrive to make installation even easier. The Power System Series are neatly packaged onto a pre-assembled board with the main connections housed within a rugged metal case and they're available in either Passenger or Driver's side builds, giving lots of options for installation. With the option to add in custom artwork like your company logo and colour scheme, and custom switch engraving to suit your install at an added cost. The Power System Range range is well ahead of the game in terms of compact power solutions, and truly something you will wonder what you did without.

### What's included?

This system is designed for the end user requiring maximum power requirements along with AC charging ability and 230v Inverter power.

You will find the following products in The Adventurer system:

- ▶ DC2DC 40+ Charger
