

HOW TO CHOOSE THE RIGHT GENERATOR >>

1. Choose the appliances that you would like to power simultaneously.
2. Record all the running Watts listed for each appliance.
3. Record the additional starting Watts listed for each appliance.
4. Add up the total of the starting watts of all these appliances.
5. Select a generator from the Maxwatt range that can deliver both the running and starting watts with ease.

DEVICE	RUNNING WATTAGE	START UP WATTAGE
Airconditioner 1HP Cooling	750W	1500W
150L Fridge	300W	600W
LED TV	350W	350W
10W LED Lights x 4	40W	40W
Select the Highest Starting Watts	2360W	2490W
REQUIRED WATTAGE	2490W

This chart is to illustrate how to calculate your total electricity consumption by adding the highest startup wattage to the combined amount of running wattage. Rather select the next model up as fluctuation in electrical current caused by large appliances such as washing machines, can cause spikes that can be harmful to your appliances and generator set. Check your wattage consumption on the back of your electrical appliance. Please ensure that the instruction booklet or user guide provided in the packaging are well read, understood & adhered to!
