Individual Parts Range Available on Following Page.

A complete patch cable system is now available specifically for most branded vehicles with trays. The following range of rear combination lamps and vehicle patch leads allow for an easy plug-in LED upgrade solution. All of these rear combination lamps feature two prewired dummy load resistors terminated with a DT04-6P male plug. Some models also include a licence plate lamp cable to connect a compatible licence plate lamp to the circuit easily. The vehicle patch leads available are terminated with a DT06-6S female connector and matching vehicle OEM plug.
